Aotearoa; and chair
of NZ Telehealth
Leadership Group*

**Audience
participation**
Your questions
matter!

This is a highly topical webinar on the progressive use of AI and the role it plays in an ever-changing landscape of healthcare.

The evolution of telehealth is growing rapidly from its basic form to a sophisticated system that enables online doctor-patient consultations, remote patient monitoring and personalised treatment plans.

Our expert speakers will explore the intersections of AI and telehealth and its potential to enhance patient care, improve diagnostics and expand access to medical services, as well as delve into the challenges AI brings, such as evaluation and regulation, privacy, accountability and much more.

Your questions matter! Participate in a dedicated Q&A session where you can enquire about specific aspects of AI and telehealth, and the speakers will share their diverse perspectives.

Be part of the conversation and register today!
